

How MuseMiles plans a slow trip

MuseMiles is an AI travel companion. Slow is a planner setting: it reduces how many stops a day the itinerary contains. This page is the process, not a slogan.

The five steps

- 1 **Set how you travel once.** Pace (slow / balanced / packed), interests, dietary needs, home airport. The planner and the in-app companion both read these.
- 2 **Pick a place.** Browse Discover (countries and cities) or name a destination. Saved hearts from the catalog are preferred in the draft.
- 3 **Generate a plan.** Answer where and how many days. MuseMiles drafts days around that pace. Slow means fewer stops, not the same packed list on a longer clock.
- 4 **Edit in one workspace.** Reorder the itinerary, attach hotels and flights (booking finishes with the provider), track budget.
- 5 **Travel with a thinner plan.** The export is a plan snapshot, not a ticket. Leave room for the afternoon you did not schedule.

What this is not

MuseMiles does not claim to replace a human guide, a visa, or insurance. AI output can be wrong — check hours and bookings before you go. Community notes on the website are editorial vignettes, not a live social feed.

Plans and price

Explorer is free (discovery, trip workspace, 20 saves, limited AI plans). Wanderer is \$9/month. Voyager is \$19/month. Details: <https://musemiles.com/pricing>
